CONSTRUCTION

Wooden houses made of cylindrical and profiled timber have unique properties due to the use of the main building material - high-altitude Carpathian fir, which has high strength and gives the room warmth, comfort and tranquility. By purchasing such a house, you can be sure of its quality, reliability and comfort - it is always warm in the cold season, and cool in summer heat, well-adjusted humidity inside the room.

WOOD:

Carpathian spruce – extremely high quality, ecologically clean, grows on the slopes of the highest mountain range of Ukraine "Chornogora", has excellent density and strength, long straight fibers, even white and, as the old carpenters say – it sounds especially, gives the house warmth, comfort, serenity.

LOGS:

Cylindrical logs diameters of 200 / 220 mm or profiled (rectangular) 180 / 200 mm wide are sufficient for the year-round operation of the house in the climatic conditions of Ukraine and Europe. A beam of 200 mm in diameter corresponds to 1 m of brick wall and protects the room from freezing up to -45°C.

ADVANTAGES:

Grinding surface of a beam – a ready decorative covering of all external and internal walls without additional facing works. Spruce, not pine, has unique properties – no dark dropping knots and without "resin pockets" (reservoirs of resin), which eventually turn into "resinous rivers" on the walls of the pine.

CLIMATE:

The wooden house is a "natural climate control", which perfectly regulates the humidity and the temperature of the air indoors: in such a house is cool in heat and warm during the cold season, a pleasant smell and a special atmosphere. Wood is a material that breathes.

Do not lay your dream of your own home – make it with our company as soon as possible

Project SAN MARINO

Total area: 460 м²

Elite house with a large lounge, a chimney room, a "second light", a sauna and a barbecue area.

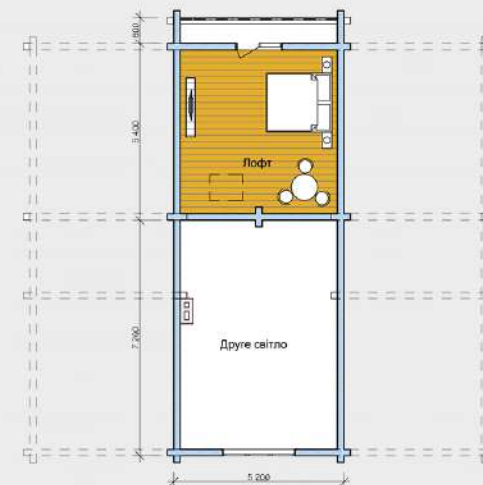

Project ANTWERPEN

Total area: 180 m²

Chalet style house with loft on the 2-d floor, excellent ergonomics and spacious

The large area of the glazing of the facade in conjunction with the "second light" provides the lightness and spacious living room of the house.

Project BERN

Total area: 120 m²

A modern two-floor chalet-style house with a gym, terrace and spacious studio on the 2nd floor.

All for rest and active lifestyle: large living room area and studios on the second floor are great for relaxation after active sports. To maintain the form conveniently in your own training room, and store the equipment – in a mini garage.

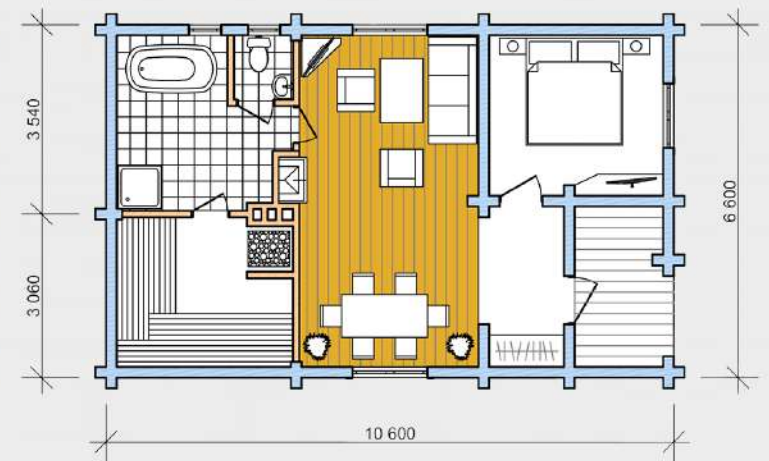

Prooject PARMA

Total area: 70 M²

2 in 1: Comfortable bathhouse or
guest house with living room and
bedroom.

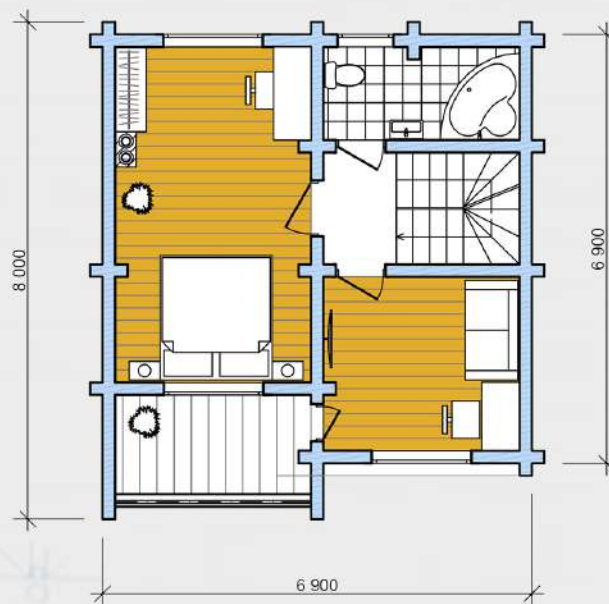

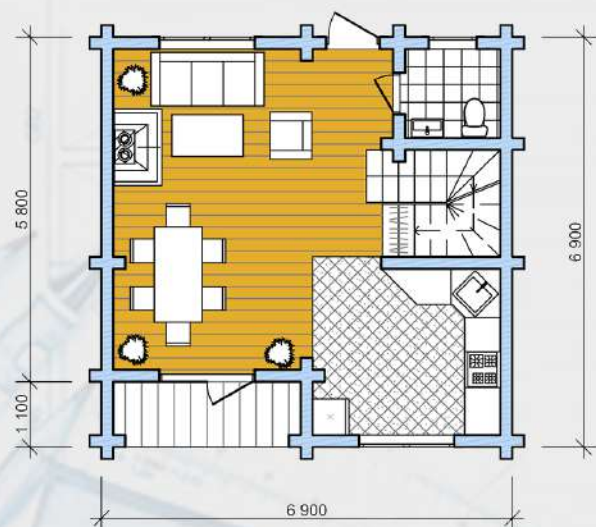

A feature of this project is the ability to use both as a bath and as a guest house. The outdoor terrace perfectly complements the combination of bath procedures with outdoor relaxation in any weather. In the shower there is enough space to accommodate an oak pool with ice water and a waterfall.

Project LISABON

Total area: 100 m²

A new generation of wooden houses with large panoramic windows to the floor.

Prooject FLORENCE

Total area: 43 M²

Cozy bathhouse with a lounge room,
a shower room, a fireplace and a
terrace.

Decorative framing of the ceiling on the roof system provides especially charm and space in the interior of the lounge. On an indoor terrace, it is convenient to have an oak chapel with cold water or a jacuzzi.

Sauna heater on wood, loading of firewood from a lounge at the entrance, there is a place for storing firewood – you can boil the sauna and do not wear wood through all rooms in the bath.

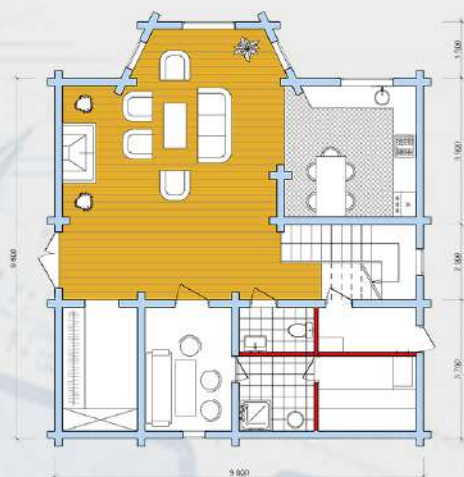

Project SALZBURG

Total area: 175 m²

House with panoramic windows, second light, fireplace and sauna.

The project was created by individual order. The layout of the house is ideal for narrow areas.

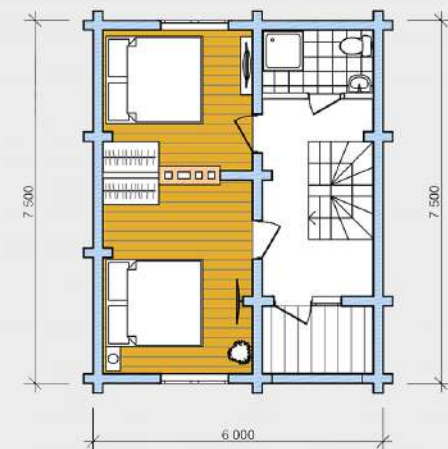

Project BERGEN

Total area: 90 M²

A compact two-floor house for both permanent residence and recreation.

Due to its planning and good ergonomics, the house is quickly heated with a fireplace, which is located in the center of the house and serves as an excellent source of aesthetic pleasure for their masters.
